

Turf and Grounds Care Machinery Maintenance and Repair Services

NEW
Regrinding service for
mower cylinders and
bottom blades

CYLINDER AND BOTTOM BLADE REGRINDING

- We can regrind all makes of cutting cylinder and bottom blade up to 1,067mm (42in) wide mounted in the frame, stripped out of the frame or still in the machine, in the case of walk-behind mowers.
- We can relief or spin grind, according to preference, with all sequences carried out under precise and automatic computerised control. All operations are liquid cooled to minimise dust and avoid heat build-up and distortion.
- We grind bottom blades on both the top and the front surfaces to ensure optimum cutting performance in work.
- We give you a guaranteed turn-around time so you know for sure when your mower will be back in action looking after your grass.
- We are able to collect and return your mower, its cutting unit(s) or its cutting cylinder(s) and bottom blade(s). We can also strip out your mower, if required. Please ask us about our range of services when you call or return the attached card.
- We take great pride in our work and guarantee complete satisfaction. If you are looking for a first-class job carried out on time at the quoted price, then give us a call. We promise that you will not be disappointed.

Turfmech Machinery, Hixon, near Stafford, has extended its range of services to offer a comprehensive cylinder and bottom blade regrinding facility for owners and users of pedestrian, ride-on, trailed and tractor-mounted mowers.

Able to handle in-situ cylinders and bottom blades, in-frame cylinders or fully stripped-out machines, the new resource is being provided by Turfmech's Customer Services department using a state-of-the-art precision grinding machine from leading British manufacturer, Hunter Grinders.

The availability of a new precision cylinder and bottom blade regrinding service follows Turfmech's acquisition of the acclaimed range of Allett professional walk-behind cylinder mowers.

With Allett mowers now being manufactured in Hixon, Turfmech needs to ensure that all mowers leave the factory with the keenest possible edge on their cylinder and bottom blade assembly.

This need has been met by the installation of a fully-automated Jupiter ATI Series 5 grinder which combines in one machine the accuracy of relief grinding, the option of spin grinding and the ability to grind bottom blades, all carried out with optimum care and precision to give you first-class results within a guaranteed turn-around time.

Turfmech selected Hunter Grinders' Jupiter ATI Series 5 cylinder and bottom blade grinder due to its proven ability to maintain and restore cylinders and bottom blades to the manufacturers' original specification. This new Turfmech facility is now available to golf and bowling clubs, sports clubs and stadiums, local authorities, contractors and other turf professionals using walk-behind, ride-on, tractor-mounted and trailed cylinder mowers.

Check out the main features of our new service in the panel alongside and then give us a call without obligation to discuss your individual cylinder and bottom blade regrinding requirements.

Ask us also about **SERVICE Plus**, our fixed-price planned maintenance scheme for all professional turf and grounds care machinery, designed to minimise downtime, running costs and worries about unplanned stoppages and breakdowns.

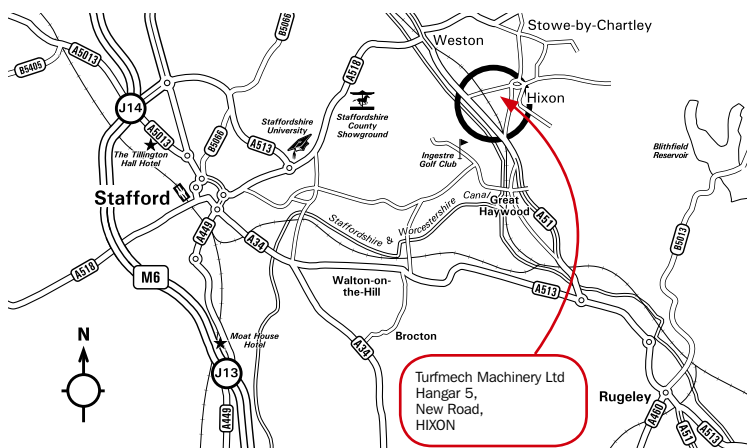

Turf and Grounds Care Machinery Maintenance and Repair Services
